Ataraxy || Ateſte.

ATARAXY, a term uſed by the ſtoics and ſceptics, to denote that calmneſs of mind which ſecures us from all emotions ariſing from vanity and ſelf-conceit.

ATARNEA, an ancient town of Myſia, ſituated between Adramyttium and Pitane, remarkable for the marriage of Ariſtotle with the ſiſter or concubine of the tyrant Hermias; alſo for the dotage of that philoſopher.

ATAXY, in a general ſenſe, the want of order: With phyſicians, it ſignifies irregularity of criſes and paroxyſms of fevers.

ATCHE, in commerce, a ſmall ſilver coin uſed in Turky, and worth only one third of the Engliſh penny.

ATCHIEVEMENT, in heraldry, denotes the arms of a perſon, or family, together with all the exterior ornaments of the ſhield; as helmet, mantle, creſt, ſcrolls, and motto, together with ſuch quarterings as may have been acquired by alliances, all marſhalled in order.

ATCHIEVE. This term is derived from the French *achever*, i. e. to finiſh or make an end of; but ſignifies, in heraldry, to perform great actions or exploits.

ATE, the goddeſs of miſchief, in the Pagan theology. She was daughter of Jupiter, and caſt down from heaven at the birth of Hercules. For Juno having deceived Jupiter, in cauſing Euriſtheus to be born before Hercules, Jupiter expreſſed his reſentment on Ate, as the author of that miſchief; and threw her headlong from heaven to earth, ſwearing ſhe ſhould never return thither again, (*Homeri Il.* xix. 125.) The name of this goddeſs comes from ατάω, *noceo*, to *hurt*. Her being the daughter of Jupiter means, according to mythologiſts, that no evil happens to us but by the permiſſion of providence; and her baniſhment to earth denotes the terrible effects of divine juſtice among men.

ATEGUA, or ATTEGUA, an ancient town of Spain, placed by ſome in the road from Antiquara, now Antequera, to Hiſpalis, or Seville; by others near Alcala Real; which laſt is the more probable ſituation, becauſe the flumen falſum, now the Salado, was in its neighbourhood. Now *Tebala Vieja*, or *Teivela*.

ATELLA, an ancient town of Campania in Italy, between Capua and Neapolis. From this town the *Atellanæ fabulæ*, or *Atellani ludi*, took their name. Theſe were alſo called *Oſci*, from their inventor, in whoſe territory Atella lay. They were generally a ſpecies of farce, interlarded with much ribaldry and buffoonery; and ſometimes were exordia or interludes preſented between the acts of other plays. The actors in theſe farces were not reckoned among the common players, nor deemed infamous; but retained the rights of their tribe, and might be liſted for ſoldiers, the privilege only of free men. The ruins of this town are ſtill to be ſeen about 11 miles from the modern Averſa, which was built out of its materials.

A TEMPO GIUSTO, in muſic, ſignifies to ſing or play in an equal, true, and juſt time.

ATERNUM, a town of Lucania in Italy, now *Aterni*, (Cluverius): Alſo a town in the territory of the Piceni, now *Peſcara*, a port-town of Naples, ſituated on the Adriatic. E. Long. 15. 25. N. Lat. 42. 30.

ATESTE, a town in the territory of Venice in Italy, now called *Eſte*. E. Long. 12. 6. N. Lat. 45. 25.

ATHAMADULET, the prime miniſter of the Perſian empire, as the grand vizier is of the Turkiſh empire. He is great chancellor of the kingdom, preſident of the council, ſuperintendent of the finances, and is charged with all foreign affairs.

ATHAMANTA, SPIGNEL; a genus of the dinynia order, belonging to the pentandria claſs of plants. Of this genus Linnæus enumerates nine ſpecies; but none of them merit particular notice except the cretenſis, otherwiſe called *daucus creticus*. This is an umbelliferous plant growing wild in the Levant and the warmer parts of Europe. The leaves are irregularly diſpoſed, and formed like thoſe of fennel. The flower-ſtalk riſes about two feet high, ſending out many branches, terminated at the top by compound umbels, compoſed of near 20 ſmall ones. Theſe have white flowers with five petals, which are ſucceeded by oblong, hairy, channelled fruit, divided into two parts, containing one oblong hairy ſeed. The ſeeds have a warm biting taſte, with an agreeable aromatic ſmell. They are kept in the ſhops as a medicine, are carminative, and ſaid to be diuretic; but are little uſed in practice. The plant may be propagated from ſeeds, which ſhould be ſown on an open bed of light dry ground; the following autumn the plants ſhould be taken up, and planted at about a foot diſtance in a bed of light ſandy earth, where the roots will continue ſeveral years.

ATHANASIA, GOLDILOCKS; a genus of the polygamia æqualis order, belonging to the ſyngeneſia claſs of plants. Of this genus, Dr Linnæus mentions 11 *Species*; of which the following ſix are by Mr Miller reckoned worthy of a place in thoſe gardens where there are conveniencies for preſerving tender plants, as none of theſe ſpecies will outlive the winters of this country. 1. The dentata grows naturally at the Cape of Good Hope. It riſes three or four feet high, ſending out many ſide-branches, garniſhed with pretty long narrow leaves, having ſome reſemblance to thoſe of buckthorn plantain. The branches are generally terminated by yellow flowers formed into a kind of umbel. Theſe flowers appear early in ſummer, and the ſeeds ripen in autumn. 2. The trifurcata is alſo a native of Africa, as are the three following ſorts. It is a ſhrubby plant, about the height of the former, ſending out ſeveral weak ſhoots, garniſhed with awl-ſhaped trifid leaves ſet cloſe to them, of a pale ſilvery colour. The flowers are yellow, and terminate the branches in a corymbus. They appear in Auguſt, and the ſeeds ripen in October. 3. The crithmifolia riſes with a ſtrong ſhrubby ſtalk to the height of ſix or eight feet, ſending out many ligneous branches garniſhed with long narrow leaves terminating in four or five parts like thoſe of ſamphire. The flowers are like thoſe of the former, and appear in July and Auguſt, being ſucceeded by ſeeds which ripen in October. 4. The pubeſcens hath ſtrong woody ſtalks four or five feet high, covered with a woolly bark, as are alſo the branches, which are cloſely garniſhed with entire, ſpear-ſhaped, woolly leaves, and are terminated by yellow flowers having a long foot-ſtalk, and are ſometimes ſucceeded by ſeeds that ripen in the autumn. 5. The annua is a low annual plant, ſeldom riſing above a foot high, and ſending forth two or three ſlender branches garniſhed with wing-pointed leaves: the ſtalks are terminated
