ENTOMOLOGY.

a great height; to accomplish which, they climb up some eminence, and are walked about by the winds, filling the air with their threads. They are destroyed by the spikes and ichneumon.

Linnaeus has subdivided this genus according to the number and position of their eyes:

A. _Eyes eight._

1. Eyes placed thus, :

fasnata. Of a silver color; the abdomen marked with yel- lowish bandes; the legs surrounded with brown rings. 49. A native of the island of Malachi

* diadema Abdomen nearly globale and reddish; brown, mark- ed with a white cross composed of dots. 1. A native of Europe, on trees; it is a very beautiful insect.

aquatica Browny abbonen ovat and of an ash colour; the back brown, marked with two dots. 30. A native of Europe, in stagnant waters, where it direct to the bottom in search of the area. It takes up to winter quar-ters in an empty snail shell, the aperture of which it closes up with a web; jaws black, claws red.

2. Eyes placed thus, :

Thorax hairy, and of an ash colour; the abdomen oval, black, and spotted with red. 95. A native of America; large, the thorax oval, legs black, thighs pale.

latro.

domestic.

obs.

3. Eyes placed thus,

globosa. Black; sides of the abdomen of a blood-red colour.

99. A native of Europe, in meadows.

4. Eyes placed thus,

argentata.

Abdown white, and brown behind, and marked round the edge with six small projections. 70. A native of South America.

5. Eyes placed thus, :

Abdenom oval and brown, marked at the base with two white dots. 16. A native of Europe, in meadows; it washes near the nest of the larva of different insects, and make their coming out, when it leaves on one after another, and sucks out their substance.

fumigate.

Abdomoval, of a brownial, colour, 40. A native of Europe, age gardens, and carries its eggs behind it enclosed in a bag; legs livid, marked with unequal brown rings set close together.

saccata.

Eyes placed thus, :

Abdemon long, of a silver colour tinged with green, the legs extended longitudinally. 22. A native of Europe, in woods; its legs are applied closely to the branches.

extensa.

ridulana.

Shining black; the abdomen hairy and black. 73. A native of America; it forms a nest under ground, and spin as large cylindrical web, which is covered with a id; its bite is very painful, and frequently occasions fever and delirium, which is soon removed by a

Aptera

gentle suborfics, thorax marked with a large depressed circular spot; abdominal oval; legs equal.

9. Eyes placed thus, :

Black, thorax marked with a white line on the back* density 79. A native of Britain.

Marked with triangular black spots on the back of torantsis, the abdomen; the legs spotted with black. 34. A native of the south of Europe, particularly Italy and Barbary. It is found in screens in agriculture soil; its bite was formerly supposed to be combble by nothing but remains; though it occasions a great deal of pain, it is almost never fatal.

8. Eyes placed thus,

Oval and oblong; thorax hair, white; abdomen and _pakkra_. legs black, marked with yellow bands. 32. A native of Europe.

9. Eyes placed thus,

Black, abdominal oval, forehead white, and leaps on gocuit, its prey. 84. It is to be found frequently in woods about Vienna; abdommed with two compressed dots.

10. Eyes placed thus,

Thorax orbicular and convex, with a transverse cen-orientral tra excavation. 31. It is a native of South America, among others, where a preys upon the larger insects, and even small birds, dropping into their nests, and sucking their blood and legs; it is of so enormous a size, that its flag may be compared to the latons of a havk, and its eyes are very large.

11. Eyes placed thus,

Of a grayish rusty colour, and slightly clouded; tho-truncets, rax globular, and slightly heart-shaped; abdomen some-what irregular, and marked with a faint longitudinal cross. 85. A native of Europe, on oak and other trees; abdommed marked with four impressed dots on the back; papilla three.

12. Eyes placed thus,

Abdomen oval, ostusely conic behind, variegated comis. with brown and white; beneath black. 86. A native of Europe, among boshes; it spins and spreads out a web, to the surface of which it attaches the insects it has emanated, after it has stacked their joint. Tho-rax buck, slightly tinged with rusty colour, and nearly double behind; legs gravy, marked with brown rings; abdommed marked as a whilish spot; beneath resem- bhing a horse shoe; papilla four.

13. Eyes placed thus,

Hairy; body oval, black, variegated with brown, albfiform. 99. A native of Europe.

B. Eyes six, placed thus, ...

Abdomen greenish, the sides yellow. 30. A na- agents rive of Europe; in gardens.

a great height; to accomplish which, they climb up some eminence, and are wafted about by the winds, filling the air with their threads. They are destroyed by the sphex and ichneumon.

Linnæus has subdivided this genus according to the number and position of their eyes.

A. *Eyes eight.*

1. *Eyes placed thus,* : ⁘ :

fasciata. Of a silver colour; the abdomen marked with yellowish bands; the legs surrounded with brown rings. 48. A native of the island of Madeira.

* *diadema* Abdomen nearly globular and reddish; brown, marked with a white cross composed of dots. 1. A native of Europe, on trees; it is a very beautiful insect.

* *aquatica* Brown; abdomen oval and of an ash colour; the back brown, marked with two dots. 39. A native of Europe, in stagnant waters, where it dives to the bottom in search of its food. It takes up its winter quarters in an empty snail shell, the aperture of which it closes up with a web; jaws black, claws red.

2. *Eyes placed thus,* : ⁘ :

latro. Thorax hairy, and of an ash colour; the abdomen oval, black, and spotted with red. 95. A native of America; large, the thorax oval, legs black, thighs pale.

* *domestica.* Abdomen oval and brown, marked with five black spots nearly contiguous, the anterior ones larger than the others. 9. A native of Europe, in houses, and about windows; feeds chiefly on flies.

3. *Eyes placed thus,* ⁘

* *globosa.* Black; sides of the abdomen of a blood-red colour. 69. A native of Europe, in meadows.

4. *Eyes placed thus,* ⁘

argentata. Abdomen white, and brown behind, and marked round the edge with six small projections. 70. A native of South America.

5. *Eyes placed thus,* ⁘

fumigata. Abdomen oval and brown, marked at the base with two white dots. 16. A native of Europe, in meadows; it watches near the nests of the larvæ of different insects, and waits their coming out, when it seizes on one after another, and sucks out their substance.

* *saccata.* Abdomen oval, of a brownish colour. 40. A native of Europe, in gardens, and carries its eggs behind it enclosed in a bag; legs livid, marked with unequal brown rings set close together.

Eyes placed thus, ::::

extensa. Abdomen long, of a silver colour tinged with green, the legs extended longitudinally. 22. A native of Europe, in woods; its legs are applied closely to the branches.

nidulans. Shining black; the abdomen hairy and black. 73. A native of America; it forms a nest under ground, and spins a large cylindrical web, which is covered with a lid; its bite is very painful, and frequently occasions fever and delirium, which is soon removed by a gentle sudorific; thorax marked with a large depressed circular spot; abdomen oval; legs equal.

7. *Eyes placed thus,* ⁘

Black, thorax marked with a white line on the back. 79. A native of Britain. * *dorsata*

Marked with triangular black spots on the back of the abdomen; the legs spotted with black. 34. A native of the south of Europe, particularly Italy and Barbary. It is found in caverns in argillaceous soil; its bite was formerly supposed to be curable by nothing but music; though it occasions a great deal of pain, it is almost never fatal. *tarantula.*

8. *Eyes placed thus,* ⁘

Oval and oblong; thorax hairy, white; abdomen and legs black, marked with yellow bands. 32. A native of Europe. *pulchra.*

9. *Eyes placed thus,* ⁘

Black, abdomen oval, forehead white, and leaps on its prey. 84. It is to be found frequently in woods about Vienna; abdomen marked with two compressed dots. *goeæi.*

10. *Eyes placed thus,* ⁘

Thorax orbicular and convex, with a transverse central excavation. 31. It is a native of South America, among trees, where it preys upon the larger insects, and even small birds, dropping into their nests, and sucking their blood and eggs; it is of so enormous a size, that its fangs may be compared to the talons of a hawk, and its eyes are very large. *aviculariæ*

11. *Eyes placed thus,* ⁘

Of a grayish rusty colour, and slightly clouded; thorax globular, and slightly heart-shaped; abdomen somewhat triangular, and marked with a faint longitudinal cross. 85. A native of Europe, on oak and other trees; abdomen marked with four impressed dots on the back; papillæ three. *truncata.*

12. *Eyes placed thus,* ⁘

Abdomen oval, obtusely conic behind, variegated with brown and white; beneath black. 86. A native of Europe, among bushes; it spins and spreads out a web, to the surface of which it attaches the insects it has ensnared, after it has sucked out their juice. Thorax black, slightly tinged with rusty colour, and nearly double behind; legs gray, marked with brown rings; abdomen marked with a whitish spot, beneath resembling a horse shoe; papillæ four. *conica.*

13. *Eyes placed thus,* ⁘

Hairy; body oval, black, variegated with brown. 99. A native of Europe. *albifrons.*

B. *Eyes six, placed thus,* ⁘

Abdomen greenish, the sides yellow. 30. A native of Europe; in gardens. * *sponsa* *lata.*

C. *Eyes*
