we houls the truth of fish felt, we must all tell an - knowledge their probability, fines we meet every day with a number of similar examples. When we fee a chodply to develop numerical in thoughts to be in a moment let to the outward funds, should we not imagine him to be wholly engroffed with the cure of his own private affairs, or at the public west but the do- jed all all this product mediums in its plethora of ex- erdles like mind, by the movement of a piece of ivory. From this careful of the mind that writes the picture we w fortunities take in refined and delicate fenitments, which, after the moment of highly dependents, (_Ed\)_ fact of all federal, fell out case country, are sometimes strictly contested, but fo as to afford us the pleasure of dilovering them."

Seules.

Theres _de terit-_ _meregé ahle._

From time of the foregoing remarks we alle for that "natural power and does to use the frequency and excellence of our mental facilities into forgetting so that ites ought to cultivate them well, as being on better and our me- ble part, in the criterion of which that of the fun- tive facilities should be merely fulbervent. But, although the pleasure are has nature rendered is a great degree independent of surfaces, fill you have a in our power to make more all more durable by vary- ing and mixing them with one another, or by interposing between those that are very reasonable others that are led yielding, fo as that no individual pleas that be in recent.

Helden the circumstances already noticed, there are other all ways different kind, who have the conferderable influence on the pleasures of the fruits ; such as different conditions of the whole he's, particularly of the nerves, or certain areas or functions, to which functions home organs of knife, and perhaps was the freedom of itself, are in a great creative tuberierism. This is one of the cuenta may many pleasure, which we did come with all our mighty cannot be immense if it a perfect in the thiry, giving water to better him i if hungry, any kind of food is agreeable, even the finest il force in general. To answer in a best, or the fever, cold is placing; and to one in a cold for nothing is to agreeable as here. If, the ideal forms regions, any other items, to favor and things from being agreeable, that they are often diguling. The most decided plutton canus always fulfill a language fails.

Before the facilities excitedly external objects, there are others also which could pain and pleasure. If the effects of the models be foreign only and obterical, and not continued to as to fatigue us, it enables pleasure. On the contrary, when this section is situated with a kind of illibides, inflation, difficulty, and difficulty, is cru- fes just more or left. In fine, various blues and aflecoins of the mind, fach as the exercise of memory imagination, and judgment, nearly for familiar reasons, are founders painful, in other times agreeable. Aminn affection, qui model great certain, welcomesness, not graves the ditture, butuye partner acor certain vive frangust j, business intention thatum eatingumi, fac- plus longa valetiation macarant.. Somul ealmas, que uat exhaustiv vies redefendig egemas, cercifin, vi de es fehlt, et annon et corporti D'Addin, five asimií five

corporais antirigue vies languefuct) ni mini sarecrisions hind minu benefutur. Statute provadi term paresv, ut fingularme porttima, et uni- verdi corpus anisimique vies ufu roborentur et acuin-

tur i y le hici Herme estos fines polulis :its ut neque geen roluir, natural ulas impone sanitatrer, neque ultra modum intendur."

Of fact infections and fields are are agreeable of disgreensils, we may remark, its a little, yet that they differ much, not only in degree, but in kind and to slightly. Some belong to the animal part of our mis-ture, and are common to us with the brains: often be-long on the rational and moral than the first are more properly called, _depilation_, the fall feeling. The Friends word fenomen is common to hold?"

The Authorized nature, in the distribution of agree- able and painful feelings, hair wisely and hencerevolently conducted the good of the few themes, which seem then us, by the means, which tensor of conduct we ought to hold. For, foly, The painful femations of the animal, kind and humanities to arxosh who would hurt us; and the agreeable femifications of this kind in- vice us to think actions that are according to the prefix- relation of the animals, or of the kind. Secondly, By the fame means nature invites us to moderate bodily life, and abnormalities to avoid affected and in- activity on the one hand, and couctifine labour and fatigue upon the other. Thirdly, The meanase ex-ce of all our national poverty gives practice. Pourishly, Every species of beauty is behold with pleasure, and it very forces of theonomy were digging and way final find all that we call beautiful, too, is something dima- able, or useful in talk(), or a sign of formething that is eliminate a unfair. Fylility. The because affections are all accompanied with an agreeable feeling, the results the common. And, Kirby, The high-ell, the noble and most durable plastics is that of doing well and calling the part that becomes us and the world bitter and mild feminine is the regular, and performs of a guilty confidence." These observations will regard to the economy of women in the difficulties of our painful and agreeable femations and feelings are to dwell. Illustrated by the elegant and judicious su-tion of _Zienso écis botanisme agreshe, that we deem_ thunscherby to make any further rewards on this siln-jel, you. Haravess and Paracusary. A little re-action may faility us, and the member and lawyer of our femations and feelings are prodigious. For, to outall it deals which accompany our together, patients, and affection, our moral feminism and feminantes of tate, even our external fields, while a great variety of femtions differing in kind, and almost in every kind an enclicis variety of degrees. Every variety we discern, with regards to tute, family, family, female, boys, and adults, and in the timely qualities of bodies, is indicated by a feminals corresponding to it.

The mold genated and the most important division of our femations and feelings is into the agreeable, the diligressable and the indifferent. Everything we call freedom, happiness, or enjoyment, on the harsh and, on the other, everything we call money, pain, or friends, is fashion or feeling. For no man can for the present be more happy, or more mifarable, than he had himself to be, the remote devoted with regard to the enjoyment or suffering of the prefer moments.

But, besides the feminations that are agreeable or dilig agreeable, there is full a greater number that are insufficient. To that he we give a little attention, that they have no name, and are immediately forgotten as it they had

Senſes. we doubt the truths of ſuch facts, we muſt at leaſt acknowlege their probability, ſince we meet every day with a number of ſimilar examples. When we ſee a cheſs-player ſo deeply immerſed in thought as to be in a manner loſt to his outward ſenſes, ſhould we not imagine him to be wholly engroſſed with the care of his own private affairs, or of the public weal? but the object of all this profound meditation is the pleaſure of exerciſing the mind by the movement of a piece of ivory. From this exerciſe of the mind alſo ariſes the pleaſure we ſometimes take in refined and delicate ſentiments, which, after the manner of Virgil's ſhepherdeſs, (*Et fugit ad ſalices, ſed ſe cupit ante videri*), are ſometimes artfully concealed, but ſo as to afford us the pleaſure of diſcovering them *."

* *Theorie des Sentiments agreéables.*

From ſome of the foregoing remarks we alſo ſee that nature points out to us the ſuperiority and excellence of our mental faculties, thus ſuggeſting to us that we ought to cultivate them moſt, as being our better and our nobler part, to the cultivation of which that of our ſenſitive faculties ſhould be merely ſubſervient. But, although our pleaſures are thus by nature rendered in a great degree independent of ourſelves, ſtill we have it in our power to make them all more durable, by varying and mixing them with one another, or by interpoſing between thoſe that are very agreeable others that are leſs pleaſing, ſo as that no individual pleaſure ſhall be in exceſs.

Beſides the circumſtances already noticed, there are others of a very different kind, which have alſo conſiderable influence on the pleaſures of the ſenſes; ſuch as different conditions of the whole body, particularly of the nerves, or of certain organs or functions, to which functions ſome organs of ſenſe, and perhaps even the ſenſation of theſe, are in a great meaſure ſubſervient. This is one of the cauſes why many pleaſures, which we cultivate with all our might, cannot be immortal. If a perſon be thirſty, ſpring water is nectar to him; if hungry, any kind of food is agreeable, even the ſmell of food is grateful. To a man in a heat, or in a fever, cold is pleaſing; and to one in a cold fit nothing is ſo agreeable as heat. To theſe ſame perſons, at other times, ſo far are theſe things from being agreeable, that they are often diſguſting. The moſt decided glutton cannot always reliſh a ſumptuous feaſt.

Beſides the ſenſations excited by external objects, there are others alſo which cauſe pain and pleaſure. If the action of the muſcles be ſtrong, eaſy, and cheerful, and not continued ſo as to fatigue us, it cauſes pleaſure. On the contrary, when this action is attended with a ſenſe of liſtleſſneſs, laſſitude, difficulty, and debility, it cauſes pain more or leſs. In fine, various ſtates and affections of the mind, ſuch as the exerciſe of memory, imagination, and judgement, nearly for ſimilar reaſons, are ſometimes painful, at other times agreeable. "Animi affectus, qui modici grate excitant, vehementes, aut graves et diuturni, hujus pariter ac corporis vires frangunt; hominem interdum ſtatim extinguunt, ſæpius longa valetudine macerant. Somni etiam, quo ad exhauſtas vires reficiendas egemus, exceſſus, vel defectus, et animo et corpori nocet."—"Deſidia, ſive animi ſive corporis, utriuſque vires langueſcunt: nimia exercitatione haud minus læduntur. Statuit enim provida rerum parens, ut ſingularum partium, et univerſi corporis animique vires uſu roborentur et acuantur; et huic iterum certos fines poſuit: ita ut neque quem voluit natura uſus impune omittatur, neque ultra modum intendatur *."

Senſes. * *Conſpect. Medicin.*

"Of ſuch ſenſations and feelings as are agreeable or diſagreeable, we may remark," ſays Dr Reid, "that they differ much, not only in degree, but in kind and in dignity. Some belong to the animal part of our nature, and are common to us with the brutes: others belong to the rational and moral part. The firſt are more properly called *ſenſations*, the laſt *feelings*. The French word *ſentiment* is common to both."

"The Author of nature, in the diſtribution of agreeable and painful feelings, hath wiſely and benevolently conſulted the good of the human ſpecies; and hath even ſhewn us, by the ſame means, what tenor of conduct we ought to hold. For, *firſt*, The painful ſenſations of the animal kind are admonitions to avoid what would hurt us; and the agreeable ſenſations of this kind invite us to thoſe actions that are neceſſary to the preſervation of the individual, or of the kind. *Secondly*, By the ſame means nature invites us to moderate bodily exerciſe, and admoniſhes us to avoid idleneſs and inactivity on the one hand, and exceſſive labour and fatigue upon the other. *Thirdly*, The moderate exerciſe of all our rational powers gives pleaſure. *Fourthly*, Every ſpecies of beauty is beheld with pleaſure, and every ſpecies of deformity with diſguſt; and we ſhall find all that we call beautiful, to be ſomething eſtimable, or uſeful in itſelf, or a ſign of ſomething that is eſtimable or uſeful. *Fifthly*, The benevolent affections are all accompanied with an agreeable feeling, the malevolent with the contrary. And, *Sixthly*, The higheſt, the nobleſt and moſt durable pleaſure is that of doing well and acting the part that becomes us; and the moſt bitter and painful ſentiment is the anguiſh and remorſe of a guilty conſcience." Theſe obſervations with regard to the economy of nature in the diſtribution of our painful and agreeable ſenſations and feelings are ſo well illuſtrated by the elegant and judicious author of *Theorie des Sentiments agreables*, that we deem it unneceſſary to make any further remarks on this ſubject. (See HAPPINESS and PLEASURE.) A little reflection may ſatisfy us, that the number and variety of our ſenſations and feelings are prodigious. For, to omit all thoſe which accompany our appetites, paſſions, and affections, our moral ſentiments and ſentiments of taſte, even our external ſenſes, furniſh a great variety of ſenſations differing in kind, and almoſt in every kind an endleſs variety of degrees. Every variety we diſcern, with regard to taſte, ſmell, ſound, colour, heat, and cold, and in the tangible qualities of bodies, is indicated by a ſenſation correſponding to it.

The moſt general and the moſt important diviſion of our ſenſations and feelings is into the agreeable, the diſagreeable, and the indifferent. Every thing we call pleaſure, happineſs, or enjoyment, on the one hand; and, on the other, every thing we call miſery, pain, or uneaſineſs, is ſenſation or feeling: For no man can for the preſent be more happy, or more miſerable, than he feels himſelf to be. He cannot be deceived with regard to the enjoyment or ſuffering of the preſent moment.

But, beſides the ſenſations that are agreeable or diſagreeable, there is ſtill a greater number that are indifferent. To theſe we give ſo little attention, that they have no name, and are immediately forgotten as if they had
