Wars Horas. The proper rules for choosing a horfe for carrier in war, are neither he should be tall in fiat- ture, with a county break, and out-fwelling forecechs His eye should be bright and parbling, and the white part of it covered by the eye brow. The cats should be final, thin, there, and pinkking , or if longer, the should be manhole with rafa, and well carried. The neck should be deep, and the breath large and fewling. The ribs bending, the either bound and flagging, and the buttons round and fall. The tail though be high and broad, neither too thick nor too thin; the thigh wellings; the leg broad and like, and the pallon them. When fush a horse he chodey, he must be kept high de- ring the time of his teaching, that he may be full of vigore. His bondmilt be free to any good and clean out or two parts of cats and one part, feeding our prefer, well dried and hardened. The quantity should be half a peck in the oneming, and the have quantity at now and in the evening. Upon his cutting days he is to be drifted, between five and the less than morning, and el at times or rights, to the evening he is to be dificult at four, and watered about five, and he mull always have provided given him into after evening; he must be littered about sight, and then muff the food gli- ven him for all night. The night before he is ridden all last hay is to be has a way about nine of checks, and he mull have a handful or two of cats also took four the morning; when he has eaten theirly leis to do turned upon the traffic, and indeed very well with dry wilps. Then fadidlek, and made it for his exercise. When he has performed this, is to the boven freezing into the thlile, and tribbed down with dry wifps. When this has been done, the fiddle is to be tant and, and he is to be crbbedded down with the clothes the houling cloth is then to be had on) and the double being again kid on, he is to be walked gently about till thoroughly cool. After that, he mull fixed with out meat two or three hours, then he mull be fed, yet in the afternoon he is to be rubbed and dreified as be- fore, and waccent in the ritual menor.

Horas Wow, in natural history, a species of fly- worm called _also lead_, produced e eggs deposited by a two-wing fly of the flop and line of the humble be in the intestines of horses. See Boryss.

Rose Horns, in another. Se El Hyporomans.

Horas is alo old in the military language, to cees pets the country or the body of folders who feevo on horfeback.

The horfe includes horfe guards, hoee genaudlers, and troopers. Dragoons are allo frequently comprohended under this name, though they fight on foot: of these there are now 18 regiments) believes re- No 157.

ments of dragon-quards infed in 1682. See Gra- Roors, Dragoons), and Guaxan.

Molter of the Horns. See Marxer.

Light Horns are regiments of cavalry mounted on light fruit horches, which may see final and lightly ac- cutout. They were first infed in 1757). The deno- manism and hence, chat anxietly they were lightly armed, in comparison of the royal guards, which were arned at all points.

Hongangna Horns. Se El Dorass

Horse is alo often used its various arts and manu- factories, for fomething that helps to fuflain their work from the ground, for the more commodious working at it.

The horf died by transers and filmmers, alfo called the Ig, ira piece of wood cut hollow and rounds, four or five feet long, and placed slippers upon which they per their dens et get of the dirty hair, flesh,&.

Horas is alo did not in empery for a price of wood pointed across two other perpendicular ones, to fulain the boards, phunks, so, which make bridges over-final rivers and no divers other conditions.

Horas, in tea language, is the name of a rope reach- ing from the middle of a yards in its ceremony or what called the _predecessor_, and depending about two or three feet under the yard, for the failors to tread upon which they are holding, resting, holding the fails, op- ing and the fluidizing fall bombs, etc. It orders, therefore, to keep the horfe more parallel to the yard, it is usually fupdated to it at a proper distance, by certain roppes called dirtrops, which hang about two feet under the yard, having my eye in their lower ends through which the horfe place.

Horos is alo a thick rope, extended in a perpendli- line direction near east four or after field at each if, the poprue of boiling or extending force fall upon it. When it is fixed before a mafts, it is calculated for the use of a fall called the former folkl, whole you'd being ex- tached to the horfe, by means of a rareclier or bull's eye, which chips and down occasionally, is retained in a likely position where when the fail is fet, or whilst it is holding or lowering. When the horfe is places itself or behind a mafts, it is intended for the crystal of a few, and is according to party fixed in this position, except in those floors of war which oc- refundally slither the form of flows, in order to dec- ners the enemy.

Horos is alo a cant name introduced into the mas- agement of batteries, the chance or benefit of a ticket or number for one or more days, soon consider tion, if it be drawn a prize within the time ceremonies for, of returning to the false or undrawn ticketsTo determine the value of a horfe) multiply the amount of the prizes in the lottery by the time the horfe is ha- red for, and from the produce fabricated the amount of the number of prizes by the value of an undrawn tic- ket into the time of the horfe., the remaining being divided by the number of tickets onto the whole time of drawing, the quotient is the value of the horfe. See Boryss.

Horas-Bread. See Barxad.

War-Horse. The proper rules for chooſing a horſe for ſervice in war, are theſe: he ſhould be tall in ſtature, with a comely head, and out-ſwelling forehead. His eye ſhould be bright and ſparkling, and the white part of it covered by the eye brow. The ears ſhould be ſmall, thin, ſhort, and pricking; or if long, they ſhould be moveable with eaſe, and well carried. The neck ſhould be deep, and the breaſt large and ſwelling. The ribs bending, the chine broad and ſtraight, and the buttocks round and full. The tail ſhould be high and broad, neither too thick nor too thin; the thigh ſwelling; the leg broad and flat, and the paſtern ſhort. When ſuch a horſe is choſen, he muſt be kept high during the time of his teaching, that he may be full of vigour. His food muſt be ſweet hay, and good clean oats, or two parts of oats and one part of beans or peaſe, well dried and hardened. The quantity ſhould be half a peck in the morning, and the ſame quantity at noon and in the evening. Upon his reſting days he is to be dreſſed between five and ſix in the morning, and watered at ſeven or eight. In the evening he is to be dreſſed at four, and watered about five, and he muſt always have provender given him after watering; he muſt be littered about eight, and then muſt have food given him for all night. The night before he is ridden all his hay is to be taken away about nine o'clock, and he muſt have a handful or two of oats about four in the morning: when he has eaten theſe, he is to be turned upon the ſnaffle, and rubbed very well with dry cloths; then ſaddled, and made fit for his exerciſe. When he has performed this, he is to be brought ſweating into the ſtable, and rubbed down with dry wiſps. When this has been done, the ſaddle is to be taken off, and he is to be rubbed down with dry cloths; the houſing cloth is then to be laid on; and the ſaddle being again laid on, he is to be walked gently about till thoroughly cool. After this, he muſt ſtand without meat two or three hours, then he muſt be fed; and in the afternoon he is to be rubbed and dreſſed as before, and watered in the uſual manner.

Horse Worm, in natural hiſtory, a ſpecies of fly-worm called alſo *bott*, produced of eggs depoſited by a two-winged fly of the ſhape and ſize of the humble bee in the inteſtines of horſes. See Botts.

River-Horse, in zoology. See Hippopotamus.

Horse is alſo uſed in the military language, to expreſs the cavalry; or the body of ſoldiers who ſerve on horſeback.

The horſe includes horſe guards, horſe grenadiers, and troopers. Dragoons are alſo frequently comprehended under this name, though they fight on foot: of theſe there are now 18 regiments; beſides three re- Horſe. iments of dragoon-guards raiſed in 1685. See Grenadier, Dragoons, and Guards.

Maſter of the Horse. See Master.

Light-Horse, are regiments of cavalry, mounted on light ſwift horſes, whoſe men are ſmall and lightly accoutred. They were firſt raiſed in 1757. The denomination aroſe hence, that anciently they were lightly armed, in compariſon of the royal guards, which were armed at all points.

Hungarian Horse. See Hussars.

Horse is alſo a term uſed in various arts and manufactories, for ſomething that helps to ſuſtain their work from the ground, for the more commodious working at it.

The horſe uſed by tanners and ſkinners, alſo called the *leg*, is a piece of wood cut hollow and roundiſh, four or five feet long, and placed aſlope; upon which they pare their ſkins to get off the dirt, hair, fleſh, &c.

Horse is alſo uſed in carpentry, for a piece of wood jointed acroſs two other perpendicular ones, to ſuſtain the boards, planks, &c. which make bridges over ſmall rivers; and on divers other occaſions.

Horse, in ſea language, is the name of a rope reaching from the middle of a yard to its extremity, or what is called the *yard-arm*, and depending about two or three feet under the yard, for the ſailors to tread upon whilſt they are looſing, reefing, or furling the ſails, rigging out the ſtudding-ſail booms, &c. In order, therefore, to keep the horſe more parallel to the yard, it is uſually ſuſpended to it at proper diſtances, by certain ropes called ſtirrups, which hang about two feet under the yard, having an eye in their lower ends through which the horſe paſſes.

Horse is alſo a thick rope, extended in a perpendicular direction near the fore or after-ſide of a maſt, for the purpoſe of hoiſting or extending ſome ſail upon it. When it is fixed before a maſt, it is calculated for the uſe of a ſail called the *ſquare-ſail*, whoſe yard being attached to the horſe, by means of a traveller or bull's eye, which ſlides up and down occaſionally, is retained in a ſteady poſition; either when the ſail is ſet, or whilſt it is hoiſting or lowering. When the horſe is placed abaft or behind a maſt, it is intended for the try-ſail of a ſnow, and is accordingly very rarely fixed in this poſition, except in thoſe ſloops of war which occaſionally aſſume the form of ſnows, in order to deceive the enemy.

Horse is alſo a cant name introduced into the management of lotteries, for the chance or benefit of a ticket or number for one or more days, upon condition, if it be drawn a prize within the time covenanted for, of returning to the ſeller an undrawn ticket.—To determine the value of a horſe; multiply the amount of the prizes in the lottery by the time the horſe is hired for; and from the product ſubtract the amount of the number of prizes by the value of an undrawn ticket into the time of the horſe: the remainder being divided by the number of tickets into the whole time of drawing, the quotient is the value of the horſe. See Lottery.

Horse-Bread. See Bread.

Horse-Dung, in gardening, is of great uſe in making hot-beds, for the raiſing all ſorts of early crops; as ſallading, cucumbers, melons, aſparagus, &c. for
