Endleſs || Engine.

ENDLESS, ſomething without an end: thus authors mention endleſs rolls, the endleſs ſcrew, &c.

ENDORSE, in heraldry, an ordinary, containing the eighth part of a pale, which Leigh ſays is only uſed when a pale is between two of them.

ENDORSED, in heraldry, is ſaid of things borne back to back, more uſually called ADOSSED.

ENDOWMENT, in law, denotes the ſettling a dower on a woman: though ſometimes it is uſed, figuratively, for ſettling a proviſion upon a parſon, on the building of a church; or the ſevering a ſufficient portion of tithes for a vicar, when the benefice is appropriated.

ENDYMION, the 12th king of Elis. Being expelled his kingdom, he retired into Caria to mount Latmos, where he ſtudied the heavenly bodies, but chiefly the moon; which gave riſe to the fable of the poets, that he was beloved by the moon, who viſited him every night as he lay aſleep upon the top of that hill.

ENEMY, in law, an alien or foreigner, who publicly invades the kingdom.

ENERGUMENS, in church-hiſtory, perſons ſuppoſed to be poſſeſſed by the devil, concerning whom there were many regulations among the primitive Chriſtians. They were denied baptiſm, and the euchariſt; at leaſt, this was the practice of ſome churches: and though they were under the care of exorciſts, yet it was thought a becoming act of charity, to let them have the public prayers of the church, at which they were permitted to be preſent. See EXORCISM.

ENERGY, a term of Greek origin, ſignifying the power, virtue, or efficacy of a thing. It is alſo uſed, figuratively, to denote emphaſis of ſpeech.

ENFANS PERDUS, the ſame with forlorn-hope. FORLORN.

ENFILADE, in the art of war, is uſed in ſpeaking of trenches, or other places, which may be ſcoured by the enemy's ſhot along their whole length. In conducting the approaches at a ſiege, care muſt be taken that the trenches be not enfiladed from any work of the place. See TRENCHES.

ENFRANCHISEMENT, in law, the incorporating a perſon into any ſociety or body politic.

ENGASTRIMYTHI, in Pagan theology, the Pythians, or prieſteſſes of Apollo, who delivered oracles from within, without any action of the mouth or lips.

The ancient philoſophers, &c. are divided upon the ſubject of the engaſtrimythi. Hippocrates mentions it as a diſeaſe. Others will have it a kind of divination. Others attribute it to the operation or poſſeſſion of an evil ſpirit. And others to art and mechaniſm. M. Scottus maintains that the engaſtrimythi of the ancients were poets, who, when the prieſts could not ſpeak, ſupplied the defect by explaining in verſe what Apollo dictated in the cavity of the baſon on the ſacred tripod.

ENGENDERING, a term ſometimes uſed for the act of producing or forming any thing: thus meteors are ſaid to be engendered in the middle region of the atmoſphere, and worms in the belly.

ENGINE, in mechanics, is a compound machine, made of one or more mechanical powers, as levers, pullies, ſcrews, &c. in order to raiſe, caſt, or ſuſtain any weight, or produce any effect which could not be eaſily effected otherwiſe. The word is formed of the French *engin*, from the Latin *ingenium* "wit;" by reaſon of the ingenuity required in the contrivance of engines to augment the effect of moving powers.

Engine || England.

ENGINE *for extinguiſhing Fires*. See HYDROSTATICS, n° 33.

Pile-ENGINE, one contrived for driving piles. See PILE-*Engine*.

Steam-ENGINE, a machine to raiſe water by fire, or rather by the force of water turned into ſteam. See STEAM *Engine*.

ENGINE *for dividing Mathematical Inſtruments*. See RAMSDEN'S *Engine*.

ENGINEER, in the military art, an able expert man, who, by a perfect knowledge in mathematics, delineates upon paper, or marks upon the ground, all ſorts of forts, and other works proper for offence and defence. He ſhould underſtand the art of fortification, ſo as to be able, not only to diſcover the defects of a place, but to find a remedy proper for them; as alſo how to make an attack upon, as well as to defend, the place. Engineers are extremely neceſſary for theſe purpoſes: wherefore it is requiſite, that, beſides being ingenious, they ſhould be brave in proportion. When at a ſiege the engineers have narrowly ſurveyed the place, they are to make their report to the general, by acquainting him which part they judge the weakeſt, and where approaches may be made with moſt ſucceſs. Their buſineſs is alſo to delineate the lines of circumvallation and contravallation, taking all the advantages of the ground; to mark out the trenches, places of arms, batteries, and lodgments, taking care that none of their works be flanked or diſcovered from the place. After making a faithful report to the general of what is a-doing, the engineers are to demand a ſufficient number of workmen and utenſils, and whatever elſe is neceſſary.

ENGLAND, the ſouthern diviſion of the iſland of Great Britain. Including Wales, it is of a triangular form, and lies between the 50th and 55th degrees of north latitude, extending about 400 miles in length from ſouth to north, and in ſome places it is 300 miles in breadth. It is bounded by Scotland on the north; by the Engliſh Channel on the ſouth, dividing it from France; by the German Sea on the eaſt; and on the weſt by St George's, or the Iriſh, Channel.

1 Whence peopled.

At what time the iſland of Britain was peopled is uncertain; nor do we know whether the ſouthern or northern parts were firſt inhabited. We have no accounts that can be depended upon before the arrival of Julius Cæſar, and it is certain he found the ſouthern parts full of people of a very warlike diſpoſition. Theſe people, according to Cæſar, were a colony of the Gauls; and this opinion is embraced by moſt of the ancient as well as modern writers. It is chiefly founded on the agreement obſerved by the Romans between the two nations in their cuſtoms, manners, language, religion, government, way of fighting, &c. The more northern inhabitants, according to Tacitus, came from Germany. This he infers from the make of their limbs; but Cæſar ſimply calls them *Aborigines*.

2 Inhabited by 17 different nations.

England, including the principality of Wales, when firſt invaded by the Romans, was divided into 17 petty ſtates. 1. The Danmonii, called alſo *Dumnonii* and *Domnonii*, inhabiting the counties of Cornwal and Devonſhire. 2. The Durotriges, who inhabited the track now called *Dorſetſhire*. 3. The Belgæ poſſeſſed Somer-
